Toastie

Toastie

Toastie is designed to be better than your average toaster. The addition of digital technology as a smart toaster allows **Toastie** to create the perfect toast.

The ability to add designs to your toast creates a toast that is unique to you. Adding a window to the side lets users watch how their food is toasting in real time. Digital settings on the front with visuals that show your ideal level of toastage, along with simple buttons to start and release eliminates the hassle of buttons and knobs and levers. This gives users the most seamless toasting experience.

Navigation

What are we toasting?

This button allows you to select what item you would like to have toasted. This includes bread, waffles, bagels, strudels, croissants, and english muffins however the possibilities are endless! (To the extent of your **Toastie...**)

How toasty?

This button allows you to select the level of burnt you want your toasted item to be. It includes 9 different settings.

Choose a design!

This button allows you to select an optional design for your toast (or no design at all). With 9 different options to choose from, your toast can be unique as ever!

Navigation

Start
